

VOLUNTEER & TRAVEL TO KENYA OR RWANDA WITH US

TRANSFORMATION

We are International Transformation Foundation, Inc. a 501 (C) (3) nonprofit organization that helps communities in Kenya and Rwanda access clean and reliable tap water.

IMPACT

For every project, we send high school, College, or university students from the USA to be part of the implementation process in an internship-like program where they gain a unique cross-cultural experience, personal and professional growth.

WE NEED YOUR HELP

CHOOSE YOUR OWN ADVENTURE

THE KIOSK

This is a school-based water kiosk where local students manage the business of selling clean water to community residents at a price set by the community. Set up at a school located in a community with no tap water system, where school-going children must walk long distances to secure water for their families before/ after going to school causing absenteeism resulting in school dropouts. A water kiosk at school provides the entire community with clean water, and Students no longer must leave class to travel far distances to collect water from a remote well/ river. It is both an educational and profitable business teaching student's business and entrepreneurial skills while generating much-needed income for the school. The setup of the kiosk is funded and developed by donations, which is where our volunteering abroad trip comes in!

Prerequisites: Travel Visa, Passport, Pocket Money, Documented Health + Travel Requirements (Yellow Fever, COVID, etc)

\$9,950

THE FOUNTAIN

The Public drinking water fountain is set up in a busy, urban area such as marketplace, sports arena, parks, bus stations for the people to access clean drinking tap water free of charge and eliminate single use plastic bottled water waste. Our design for the fountain allows no water to be wasted with an auto-stop tap which is also vandal resistant. This initiative is implemented in partnership with the local city/municipality council as most governments in Africa have banned single-use plastic, but plastic waste remains a major challenge, especially in urban areas. The greatest contributor to plastic waste is the inaccessibility to clean drinking water that forces people to buy single-use plastic bottled water. The price of the fountain and installation is provided through donations and our volunteers.
